

SEC, Inc.

SITE ENGINEERING CONSULTANTS

Civil Engineering · Land Surveying · Land Planning · Landscape Architecture

Industrial

SEC has a wide range of experience in the area of industrial facility designs. Our broad experience in this area, along with our strong background in general civil engineering, allows us to produce these projects professionally and timely. We enjoy the team atmosphere it takes to generate these projects for our clients.

We take the project from concept through construction by providing the various elements necessary in the process. SEC, Inc. has in-house surveying services and provides boundary and topographic surveys, ALTA-ACSM surveys, control surveys, and construction staking services.

SEC also provides conceptual master planning services. Our typical civil design includes the site plan, water and sewer plans, and grading, drainage and erosion control plan. Our designs are supplemented by construction details and specifications. Our project engineers coordinate the site design with the architectural, MEP, and landscape architectural consultants, as well as the reviewing departments and agencies.

SEC, Inc. designs industrial facilities for developers, contractors (design-build, design-bid-build), and owners. We provide topographic surveys for site designs and construction staking surveys.

Past industrial projects include:

- *Food Preparation Facilities*
- *Freight/Trucking Facilities*
- *Manufacturing Facilities*
- *Office/Warehouse*
- *Warehouses*

We are diligent on our clients' behalf to provide precise and quality services in all phases of the work. Because of this we are able to enjoy lasting relationships with our clients.
